**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 is indefinite because it depends on itself.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 2, 7-10, 13, 14 and 19-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Blomdahl et al. (6,481,589). Blomdahl et al. disclose, in figs. 7 and 8, a closure comprising a cap having a grip support, extrusion holes, and a monolithic compliant member including a cap liner 50A, a grip ring 40A and extrusion posts 60A. The extrusion holes are positioned in an annular upright wall extending from the annular skirt of the cap.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3-6, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blomdahl et al. Although Blomdahl et al. do not disclose the extrusion holes being disposed in the annular lateral wall extending away from the perimeter edge of the cap top wall, it would have been an obvious matter of design choice to make the extrusion holes in the Blomdahl cap to be disposed in the annular lateral wall extending away from the perimeter edge of the cap top wall in order the monolithic compliant extending through the extrusion holes via the extrusion post to tether the cap liner to the grip ring and retain the monolithic compliant member to the cap, since applicant has not disclosed that the extrusion holes being disposed in the annular lateral wall extending away from the perimeter edge of the cap top wall solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well with the extrusion holes are positioned in an annular upright wall extending from the annular skirt of the cap.

7. Claims 15-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Blomdahl et al. in view of Daenen et al. (5,868,273). Blomdahl et al. do not disclose the cap liner including a mount and a sealing ring.

Daenen et al. teach a cap liner including a mount and a sealing ring.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the Blomdahl cap liner including a mount and a sealing ring, as taught by Daenen, in order to enhance the sealing of the cap.
